WHAT IS CLAIMED IS:

5   1.   An address contact system to maintain a plurality of
address contact information, the system comprising:
        a plurality of address clients configured to respectively
create a respective one of a plurality of address contact
information;
10   an address server coupled to the plurality of address
clients and storing the plurality of address contact information;
and
        wherein the plurality of address clients are configured to
update the respective one of the plurality of address contact
15   information   and   view   the   plurality   of   address   contact
information.

        2.   A method of maintaining a plurality of address contact
information using an address contact system that includes a
20   plurality of address clients and an address server, the method
comprising:
        creating one of a plurality of address contact information
associated with one of a plurality of address clients;
        storing   the   plurality   of   address   contact   information
25   including   the   one   of   the   plurality   of   address   contact
information;
        updating   the   one   of   the   plurality   of   address   contact
information by the one of the plurality of address clients; and
        viewing the plurality of address contact information by the
30   plurality of address clients.
